

Adam Aranha

BACKGROUND

Adam began working in Software Quality Assurance in July of 2017, creating and executing test cases based off bank requirements in the NRCR project. I am currently

EXPERIENCE

Client: Canadian Imperial Bank of Commerce
Project: Cash Management Online
Date: March 2020 to September 2020
Position: QA Analyst

Description and Responsibilities

I worked remotely as a QA Analyst in CIBC's Cash Management Online application. This role involved test different scenarios, database manipulation, and reporting.

- Communicated with teams members to complete objectives
- Created and managed companies and their payments within the application
- Fulfilled payments through multiple roles in the application
- Completed administrative duties for company creation in the application

Client: Bank of Nova Scotia
Project: Scotiabank GHRT project
Date: September 2019 to February 2020
Position: QA Analyst

Description and Responsibilities

I worked onsite as a QA Analyst on Scotiabank's Global Human Resources Application. This role involved testing multiple change requests implemented to the platform every month.

- Worked with various members in the project such as Business Analysts and Developers on proprietary HR software.
- Performed various stages of testing on multiple requests while maintaining deadlines
- Competed manual testing tracked and maintained in Application Lifecycle Management (ALM)

Experience

Snapshot

Industry experience

- Digital banking
- Banking domain – Risk Management department
- Full - Stack Web Development

Applications

- HP Application Lifecycle Management (ALM)
- Jira, Confluence, Workfront
- Node
- Heroku
- Robo 3t
- GitHub

Industry Knowledge

- Functional, Integration and Regression testing
- Test preparation

Client: Bank of Nova Scotia
Project: Small Business Refresh Migration
Date: February 2019 to May 2019
Position: Content Migrator

Description and Responsibilities

I worked as the sole Content Migrator for the refresh of Scotiabank's Small Business banking website, restructuring content from copy and prior pages into the newly designed template. I worked closely with the team to gain insight on new components and templates of the Adobe Experience Manager environment.

- Assisted in presenting newly developed content at bi-weekly demos
- Maintained project deadlines and delivered content for releases on schedule
- Maintained oversight on all involved content and to append content in a timely manner
- Used prior knowledge of environments to provide suggestions and advise on limitations of current components

Client: Bank of Nova Scotia
Project: Scotiabank.com AEM Migration
Date: April 2018 to December 2018
Position: QA Analyst/Developer

Description and Responsibilities

I began as the onsite QA Analyst, testing functionality and ensuring content integrity of Scotiabank.com on their new platform, AEM. I soon transitioned to a developer role, taking on migration of content while working closely with the designers and gaining insight into the components and structure of AEM. Progress and defect tracking were managed mainly on JIRA and Workfront.

- Worked with various members in the project such as Business Analysts, Developers, Project Managers, Designers, Scrum Master
- Worked with developers and to create clear guidelines testing scenarios.
- Worked with Designers to create to solidify page templates and layouts.
- Performed various stages of testing and instructing others on scope and expectations.
- Worked with offshore QA and development, improving on existing testing methods and creating consistent page templates.

Client: Bank of Nova Scotia

Project: Non Retail Credit Risk Applications, Risk Origins, Datastage
Date: July 2017 to March 2018
Position: QA Analyst

Description and Responsibilities

I was a QA Analyst for a CGI testing team on a Scotiabank, Risk Management project. The applications I tested were related to Loan, Derivative and Security positions held by the bank. The project was currently in Steady State, so my testing mainly involved Maintenance Releases and Project Change Notifications (PCNs).

- Worked with various stakeholders in the project such as Business Analysts, Developers , Project Managers, Vendors, Scrum Master, Deployment Personnel
- Turned complex requirements in FSDs and PCNs and into understandable, clear test cases.
- Worked with BNS business to update test cases based on their feedback and get sign offs.
- Managed HP ALM by creating test folders, uploading test cases, executing, updating defects, etc.
- Performed different types of testing such as Functional, Regression, Front-end and Back-end.
- Reported defects from variation on requirements. Worked with various personnel to update, retest defects.
- Worked with offshore QA members on ramping up, assigning new tasks and follow ups on a daily basis.
